New Hampshire Dragonfly Survey Incidental Sightings Form

Return to: New Hampshire Audubon, 84 Silk Farm Road, Concord, NH 03301

Use this form to record dragonfly or damselfly records from locations other than your primary site(s). If you visit such a site regularly and obtain more than half a dozen records each time, it is probably better to use the standard site and visit forms. The same data are required for each species, but note the addition of columns for site location and date.
For Site Names, please use as concise a name as possible so the location can be found on a map. Use a topo map or Delorme map as a reference when possible.

Observer(s)_____ Year_____

In the table below list each species detected on this visit, along with its Voucher Category, relative abundance, and evidence of reproductive behavior. The latter two categories are particularly useful for the species of conservation priority as asterisked in Table 1 and on the field checklist. This table continues on the back of this page.

Voucher Categories: V = visual only, C = capture and release, P = photograph, S = specimen
Relative Abundance: U = uncommon (<5), C = common (5-20), A = abundant (>20)
Reproductive behavior: Tandem = tandem pair, Wheel = copulating pair, Ovip = ovipositing female, Ten = teneral individuals, Ex = exuvia (or eclosing adult)

Date	Site Name	Town	Species (include photo file names here, when appropriate)	Voucher Category	Relative Abund.	Repro Behav
